

# Complete Docker CLI

 Cheatsheet for Docker CLI			
Run a new Container	Manage Containers	Manage Images	Info & Stats
<p>Start a new Container from an Image</p> <pre>docker run IMAGE docker run nginx</pre> <p>...and assign it a name</p> <pre>docker run --name CONTAINER IMAGE docker run --name web nginx</pre> <p>...and map a port</p> <pre>docker run -p HOSTPORT:CONTAINERPORT IMAGE docker run -p 8080:80 nginx</pre> <p>...and map all ports</p> <pre>docker run -P IMAGE docker run -P nginx</pre> <p>...and start container in background</p> <pre>docker run -d IMAGE docker run -d nginx</pre> <p>...and assign it a hostname</p> <pre>docker run --hostname HOSTNAME IMAGE docker run --hostname srv nginx</pre> <p>...and add a dns entry</p> <pre>docker run --add-host HOSTNAME:IP IMAGE</pre> <p>...and map a local directory into the container</p> <pre>docker run -v HOSTDIR:TARGETDIR IMAGE docker run -v ~/.usr/share/nginx/html nginx</pre> <p>...but change the endpoint</p> <pre>docker run -it --entrypoint EXECUTABLE IMAGE docker run -it --entrypoint bash nginx</pre>	<p>Show a list of running containers</p> <pre>docker ps</pre> <p>Show a list of all containers</p> <pre>docker ps -a</pre> <p>Delete a container</p> <pre>docker rm CONTAINER docker rm web</pre> <p>Delete a running container</p> <pre>docker rm -f CONTAINER docker rm -f web</pre> <p>Delete stopped containers</p> <pre>docker container prune</pre> <p>Stop a running container</p> <pre>docker stop CONTAINER docker stop web</pre> <p>Start a stopped container</p> <pre>docker start CONTAINER docker start web</pre> <p>Copy a file from a container to the host</p> <pre>docker cp CONTAINER:SOURCE TARGET docker cp web:/index.html index.html</pre> <p>Copy a file from the host to a container</p> <pre>docker cp TARGET CONTAINER:SOURCE docker cp index.html web:/index.html</pre> <p>Start a shell inside a running container</p> <pre>docker exec -it CONTAINER EXECUTABLE docker exec -it web bash</pre> <p>Rename a container</p> <pre>docker rename OLD_NAME NEW_NAME docker rename 096 web</pre> <p>Create an image out of container</p> <pre>docker commit CONTAINER docker commit web</pre>	<p>Download an image</p> <pre>docker pull IMAGE[:TAG] docker pull nginx</pre> <p>Upload an image to a repository</p> <pre>docker push IMAGE docker push myimage:1.0</pre> <p>Delete an image</p> <pre>docker rmi IMAGE</pre> <p>Show a list of all Images</p> <pre>docker images</pre> <p>Delete dangling images</p> <pre>docker image prune</pre> <p>Delete all unused images</p> <pre>docker image prune -a</pre> <p>Build an image from a Dockerfile</p> <pre>docker build DIRECTORY docker build .</pre> <p>Tag an image</p> <pre>docker tag IMAGE NEWIMAGE docker tag ubuntu ubuntu:18.04</pre> <p>Build and tag an image from a Dockerfile</p> <pre>docker build -t IMAGE DIRECTORY docker build -t myimage .</pre> <p>Save an image to .tar file</p> <pre>docker save IMAGE &gt; FILE docker save nginx &gt; nginx.tar</pre> <p>Load an image from a .tar file</p> <pre>docker load -i TARFILE docker load -i nginx.tar</pre>	<p>Show the logs of a container</p> <pre>docker logs CONTAINER docker logs web</pre> <p>Show stats of running containers</p> <pre>docker stats</pre> <p>Show processes of container</p> <pre>docker top CONTAINER docker top web</pre> <p>Show installed docker version</p> <pre>docker version</pre> <p>Get detailed info about an object</p> <pre>docker inspect NAME docker inspect nginx</pre> <p>Show all modified files in container</p> <pre>docker diff CONTAINER docker diff web</pre> <p>Show mapped ports of a container</p> <pre>docker port CONTAINER docker port web</pre>

## Container Management CLIs

### Container management commands

command	description
<code>docker create image [ command ]</code> <code>docker run image [ command ]</code>	create the container = <code>create</code> + <code>start</code>
<code>docker start container...</code> <code>docker stop container...</code> <code>docker kill container...</code> <code>docker restart container...</code>	start the container graceful <sup>2</sup> stop kill (SIGKILL) the container = <code>stop</code> + <code>start</code>
<code>docker pause container...</code> <code>docker unpause container...</code>	suspend the container resume the container
<code>docker rm [ -f<sup>3</sup> ] container...</code>	destroy the container

---

<sup>2</sup>send SIGTERM to the main process + SIGKILL 10 seconds later

<sup>3</sup>`-f` allows removing running containers (= `docker kill` + `docker rm`)

## Inspecting The Container

### Inspecting the container

command	description
<code>docker ps</code>	list running containers
<code>docker ps -a</code>	list all containers
<code>docker logs [ -f<sup>6</sup> ] container</code>	show the container output ( <i>stdout+stderr</i> )
<code>docker top container [ ps options ]</code>	list the processes running inside the containers
<code>docker diff container</code>	show the differences with the image (modified files)
<code>docker inspect container...</code>	show low-level infos (in json format)

## Interacting with Container

### Interacting with the container

command	description
<code>docker attach container</code>	attach to a running container (stdin/stdout/stderr)
<code>docker cp container:path hostpath -</code> <code>docker cp hostpath - container:path</code>	copy files from the container copy files into the container
<code>docker export container</code>	export the content of the container (tar archive)
<code>docker exec container args...</code>	run a command in an existing container ( <b>useful</b> for debugging)
<code>docker wait container</code>	wait until the container terminates and return the exit code
<code>docker commit container image</code>	commit a new docker image (snapshot of the container)

## Image Management Commands

### Image management commands

command	description
<code>docker images</code> <code>docker history image</code> <code>docker inspect image...</code>	list all local images show the image history (list of ancestors) show low-level infos (in json format)
<code>docker tag image tag</code>	tag an image
<code>docker commit container image</code> <code>docker import url - [tag]</code>	create an image (from a container) create an image (from a tarball)
<code>docker rmi image...</code>	delete images

## Image Transfer Commands

### Image transfer commands

#### Using the registry API

<code>docker pull repo[:tag]...</code>	pull an image/repo from a registry
<code>docker push repo[:tag]...</code>	push an image/repo from a registry
<code>docker search text</code>	search an image on the official registry
<code>docker login ...</code>	login to a registry
<code>docker logout ...</code>	logout from a registry

#### Manual transfer

<code>docker save repo[:tag]...</code>	export an image/repo as a tarball
<code>docker load</code>	load images from a tarball
<code>docker-ssh<sup>10</sup> ...</code>	proposed script to transfer images between two daemons over ssh

## Builder Main Commands

### Builder main commands

command	description
<b>FROM</b> <i>image scratch</i>	base image for the build
<b>MAINTAINER</b> <i>email</i>	name of the maintainer (metadata)
<b>COPY</b> <i>path dst</i>	copy <i>path</i> from the context into the container at location <i>dst</i>
<b>ADD</b> <i>src dst</i>	same as <b>COPY</b> but untar archives and accepts http urls
<b>RUN</b> <i>args. . .</i>	run an arbitrary command inside the container
<b>USER</b> <i>name</i>	set the default username
<b>WORKDIR</b> <i>path</i>	set the default working directory
<b>CMD</b> <i>args. . .</i>	set the default command
<b>ENV</b> <i>name value</i>	set an environment variable

## The Docker CLI

```
docker build
```

```
docker build [options] .  
-t "app/container_name"    # name
```

### Create an image from a Dockerfile

```
docker run
```

```
docker run [options] IMAGE  
# see `docker create` for options
```

### Run a command in an image.

## Manage containers

```
docker create
```

```
docker create [options] IMAGE  
-a, --attach                # attach stdout/err  
-i, --interactive           # attach stdin (interactive)  
-t, --tty                   # pseudo-tty  
    --name NAME              # name your image  
-p, --publish 5000:5000     # port map  
    --expose 5432            # expose a port to linked containers  
-P, --publish-all          # publish all ports
```

```
--link container:alias # Linking
-v, --volume `pwd`:/app # mount (absolute paths needed)
-e, --env NAME=hello # env vars
```

## Example

```
$ docker create --name app_redis_1 \
--expose 6379 \
redis:3.0.2
```

Create a container from an image.

`docker exec`

```
docker exec [options] CONTAINER COMMAND
-d, --detach # run in background
-i, --interactive # stdin
-t, --tty # interactive
```

## Example

```
$ docker exec app_web_1 tail logs/development.log
$ docker exec -t -i app_web_1 rails c
```

Run commands in a container.

`docker start`

```
docker start [options] CONTAINER
-a, --attach # attach stdout/err
-i, --interactive # attach stdin
docker stop [options] CONTAINER
```

Start/stop a container.

`docker ps`

```
$ docker ps
```

```
$ docker ps -a  
$ docker kill $ID
```

Manage containers using ps/kill.

## Images

```
docker images
```

```
$ docker images  
REPOSITORY    TAG       ID  
ubuntu        12.10     b750fe78269d  
me/myapp      latest    7b2431a8d968  
$ docker images -a # also show intermediate
```

Manages images.

```
docker rmi
```

```
docker rmi b750fe78269d
```

Deletes images.

## Dockerfile

### Inheritance

```
FROM ruby:2.2.2
```

### Variables

```
ENV APP_HOME /myapp  
RUN mkdir $APP_HOME
```

### Initialization

```
RUN bundle install  
WORKDIR /myapp  
VOLUME ["/data"] # Specification for mount point
```

```
ADD file.xyz /file.xyzCOPY --chown=user:group host_file.xyz  
/path/container_file.xyz
```

## Onbuild

```
ONBUILD RUN bundle install# when used with another file
```

## Commands

```
EXPOSE 5900CMD ["bundle", "exec", "rails", "server"]
```

## Entrypoint

```
ENTRYPOINT ["executable", "param1", "param2"]ENTRYPOINT  
command param1 param2
```

Configures a container that will run as an executable.

```
ENTRYPOINT exec top -b
```

This will use shell processing to substitute shell variables, and will ignore any `CMD` or `docker run` command line arguments.

## Metadata

```
LABEL version="1.0"  
LABEL "com.example.vendor"="ACME Incorporated"LABEL  
com.example.label-with-value="foo"  
LABEL description="This text illustrates \  
that label-values can span multiple lines."
```

# docker-compose

## Basic example

```
# docker-compose.ymlversion: '2'services:  web:    build: .    # build from Dockerfile    context: ./Path    dockerfile: Dockerfile    ports:      - "5000:5000"    volumes:      - ./code  redis:    image: redis
```

## Commands

```
docker-compose start
docker-compose stop
docker-compose pause
docker-compose unpause
docker-compose ps
docker-compose up
docker-compose down
```

## Reference

### Building

```
web:  # build from Dockerfile  build: .  # build from custom Dockerfile
```

```
build:
  context: ./dir
  dockerfile: Dockerfile.dev
# build from image
image: ubuntu
image: ubuntu:14.04
image: tutum/influxdb
image: example-registry:4000/postgresql
image: a4bc65fd
```

## Ports

```
ports:
  - "3000"
  - "8000:80" # guest:host
# expose ports to linked services (not to host)
expose: ["3000"]
```

## Commands

```
# command to execute
command: bundle exec thin -p 3000
command: [bundle, exec, thin, -p, 3000]
# override the entrypoint
entrypoint: /app/start.sh
entrypoint: [php, -d, vendor/bin/phpunit]
```

## Environment variables

```
# environment vars
environment:
  RACK_ENV: development
environment:
  - RACK_ENV=development
# environment vars from file
env_file: .env
env_file: [.env, .development.env]
```

## Dependencies

```
# makes the `db` service available as the hostname `database`
# (implies depends_on)
links:
  - db:database
  - redis
# make sure `db` is alive before starting
depends_on:
  - db
```

## Other options

```
# make this service extend another
extends:
  file: common.yml # optional
  service: webapp
volumes:
  - /var/lib/mysql
  - ./_data:/var/lib/mysql
```

## Advanced features

### Labels

```
services:
  web:
    labels:
      com.example.description: "Accounting web app"
```

### DNS servers

```
services:
  web:
    dns: 8.8.8.8
    dns:
      - 8.8.8.8
      - 8.8.4.4
```

### Devices

```
services:
  web:
```

```
devices:  
- "/dev/ttyUSB0:/dev/ttyUSB0"
```

## External links

```
services:  
  web:  
    external_links:  
      - redis_1  
      - project_db_1:mysql
```

## Hosts

```
services:  
  web:  
    extra_hosts:  
      - "somehost:192.168.1.100"
```

## Hosts

```
services:  
  web:  
    extra_hosts:  
      - "somehost:192.168.1.100"
```

## services

To view list of all the services running in swarm

```
docker service ls
```

To see all running services

```
docker stack services stack_name
```

to see all services logs

```
docker service logs stack_name service_name
```

To scale services quickly across qualified node

```
docker service scale stack_name_service_name=replicas
```

## clean up

To clean or prune unused (dangling) images

```
docker image prune
```

To remove all images which are not in use containers , add - a

```
docker image prune -a
```

To Purge your entire system

```
docker system prune
```

To leave swarm

```
docker swarm leave
```

To remove swarm ( deletes all volume data and database info)

```
docker stack rm stack_name
```

To kill all running containers

```
docker kill $(docekr ps -q )
```
