- ▶ Establish impact level on the business process

"The information owner is an agency official with statutory or operational authority for specified information and responsibility for establishing the controls for its generation, collection, processing, dissemination, and disposal." NIST SP 800-37

Documentation!!

Documentation importance!!

- The ownership, intellectual property rights, and copyright of their data.
- The obligations relevant to ensure the data is compliant with compliance requirements.
- The policies for protection of the data, including baselines and access controls.
- The expectations for protection and responsibilities delegated to custodians and others accessing the data.

Difference Between Data Owner/ Controller and Data Custodian/Processor

- **Owners/Controllers:**

Accountable for the protection of data based on relevant national or community laws or regulations. The natural or legal person, public authority, agency, or any other body that alone or jointly with others determines the purposes and means of the processing of personal data; where the purposes and means of processing are determined by national or community laws or regulations, the controller or the specific criteria for his nomination may be designated by national or community law.

- **Custodians/Processors:**

The processor processes data on behalf of the owners (example cloud provider). Therefore, responsible for the adherence of policies, standards, procedures, baselines, and guidelines to ensure protection while in their custody.

Privacy

- Well, it depends on who you ask. Broadly speaking, privacy is the right to be let alone, or freedom from interference or intrusion. Information privacy is the right to have some control over how your personal information is collected and used.
- Ask most people these days what they think of when it comes to privacy and you're likely to have a conversation about massive data breaches, wearable tech, social networking, targeted advertising miscues—not to mention the Snowden revelations.
- Add to that, various cultures have widely differing views on what a person's rights are when it comes to privacy and how it should be regulated.
