I have hold so many certificate like CSCU, CCNA,CCNP, MCSA,MCP and Python.
# First Lecture
Python Flask

What is Flask

- Flask is classified as a micro framework. It has its own set of tools, technologies, and libraries to help with web application development.
- Many developers prefer to start with Flask because it is more independent and flexible

History of Flask

- Flask was created by Armin Ronacher of Pocoo, an international group of Python enthusiasts formed in 2004.

- According to Ronacher, the idea was originally an April Fool's joke that was popular enough to make into a serious application.

- The name is a play on the earlier Bottle framework.

Which company use flask

Netflix

Redhat

Samsung

Nginx

Teradata

Reddit

Airbnb

Mozilla

MIT

UBER

Why Flask ?

Python Flask Outline

- python Flask and Introduction
- Python for beginners
